VOLVO TRUCKS. DRIVING PROGRESS

www.volvotrucks.co.uk

Volvo Trucks recommends that you take the time to set up your vehicles' mirrors correctly. This ensures that you are getting the widest field of view possible and keeps you and other road users safe.

Setting up your new mirrors isn't difficult, but you do need to spend time to set them up accurately. This leaflet explains exactly what you will need and how to set up your mirrors so that they adhere to the new EU legislation.

WHAT YOU WILL NEED

You will need a flat, open space approximately 20m x 30m - somewhere like a loading bay or lorry park. You will also require the following equipment

- 30m flexible tape measure
- 10 highly visible markers (e.g. road cones)
- The driver and someone to help set the mirrors

SETTING YOUR MIRRORS

1. Position the truck allowing enough space on the nearside to measure and position the markers as shown in the diagram.
2. When sat in the driving seat, put a marker on the ground to mark the position of the driver's eye-line (ocular points) - Marker E. Place the rest of the markers as shown in the diagram.
 - Markers A-D represent the close proximity/kerb mirror field of view.
 - Markers 1-5 represent the wide angle mirror field of view.
3. With the driver seated in the driver's seat adjust the mirrors so that all the cones are within the field of view.
